### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The prior art of record does not provide for an information processing apparatus with a B2B connector to provide a message exchange interface between the system and a plurality of sites external to the system and a plurality of local sites of a system, a translator which performs conversion between any two of a plurality of message formats on a message received from a sending site and performing the conversion in response to a field that is contained in the message which serves as a trigger for a specific message format and checks sentence construction of the message prior to performing the translation of the message. A message router combines the message with another message having the same destination address arriving from another site, and to decompose the message into a plurality of messages corresponding to a plurality of destination addresses when the information is associated with a plurality of destination addresses. The message translator specifies a transmission destination of the message according to a transmission origin of the message and performs automatic protocol conversion and executes encryption processing. The message broker extracts data that is necessary when executing the data exchange processing between the clients. The message router performs message routing by the use of an inbound mail box and an outbound mail box, a message separator which decomposes the message into a plurality of messages corresponding to a plurality of destination addresses. The gateway 205 executes message transmission/reception between each local site within a particular entrepreneur that has been connected via the Intranet40 and the global
